Hi folks,

I've recently upgraded from 8.2 to 9.1 and have run into all sorts of problems with printers.

I've given up on cups, but I now think its a hardware issue not a cups issue anyway and am wondering if anyone can tell me why my lp ports are as follows.

```
server:/home/pnunn # ls -l /dev/lp*
-rw-r--r-- 1 root root 5 2004-08-30 21:56 /dev/lp0
crw-rw---- 1 root lp 6, 1 2004-04-06 23:27 /dev/lp1
crw-rw---- 1 root lp 6, 2 2004-04-06 23:27 /dev/lp2
```

Why would lp0 not be crw?

Is that why when I try and print, it just vanishes into this air?

If so, how do I change it back to crw?

Thanks.

Peter Nunn.
