Thanks Ken. Forgive my inadequacies, as i'm very new on here. Also installed Linux (SUSE) only a few days ago.

I did as you suggested and it gave me this result:

```
newton@linux:~> ps auxw|grep postmaster|grep -v grep
newton@linux:~> su
Password:
linux:/home/newton # ps auxw!grep postmaster!grep -v
grep
bash: !grep: event not found
linux:/home/newton # exit
exit
newton@linux:~> ps auxw|grep postmaster|grep -v grep
newton@linux:~> cd /usr
newton@linux:/usr> cd share
newton@linux:/usr/share> cd pgsq
newton@linux:/usr/share/pgsq> ps auxw|grep
postmaster|grep -v grep
newton@linux:/usr/share/pgsq> su
Password:
linux:/usr/share/pgsq # ps auxw|grep postmaster|grep
-v grep
linux:/usr/share/pgsq # ...
linux:/usr # ..
linux:/ # ps auxw|grep postmaster|grep -v grep
linux:/ # exit
exit
newton@linux:/usr/share/pgsq> ps auxw|grep
postmaster|grep -v grep
newton@linux:/usr/share/pgsq> ...
newton@linux:/usr> ..
newton@linux:/> ps auxw|grep postmaster|grep -v grep
newton@linux:/> su
```

SuSE: Re: [SLE] Installing PostgreSQL in a Linux Environment

```
Password:
linux:/ # ps auxw|grep postmaster|grep -v grep
linux:/ # cd home
linux:/home # cd newton
linux:/home/newton # ps auxw|grep postmaster|grep -v
grep
linux:/home/newton #
.....
```

Not sure what the interpretation is for the above.
Thanks,

Newton
