Hi all,

I just ordered my first Laptop machine, and I'm wondering if anyone has used the same model, or knows if it works with SUSE Linux, or at least works with Linux in General, because I really don't plan on leaving XP on it.

Laptop Specs:

Inspiron 5150

Mobile Intel® Pentium® 4 Processor 3.06GHz, 15-in XGA

RAM 512MB, 333MHz, 2 DIMMs

Video Card 32MB DDR NVIDIA® GeForce® FX Go5200 AGP 4x Graphic

Hard Drive 30GB Hard Drive

Integrated Network Card

Internal 56K Modem

8X Max Variable DVD-ROM Drive

Primary Battery 96 WHr Lithium-Ion Primary Battery

Dell 720 Color Printer

Does anyone have a laptop like this? I haven't looked into it yet but I'm just wondering if anyone does use one of these and if they work or not. I won't be using the modem, so that doesn't matter.

I have a Cable connection, so the NIC hopefully will work. And Printers... I've never used one in Linux before, so that will be new to me.

I have about 60 OSs, including SUSE Linux 8.1 8.1 and 9.1 Professional, and BSD and Other Linux distros, and I'm wondering if anyone has had any luck with this system.

SuSE: [SLE] Dell 5150 Laptop with SUSE Linux

So what do you guys think? This is my first laptop, and I'm hoping it works out. Are Dell Inspiron Laptops generally good? Good with Linux?
