I have just secured funding to replace our (somewhat-tired) mail server. Currently we are using a recycled HP NetServer E800 running RedHat 7.2 (with no X), Squirrel Mail, SpamAssassin and Sendmail to serve c. 70 POP boxes (SMTP is provided by an external ISP for numerous reasons).

I have been using SuSE/SUSE on the desktop since 8.2 and am tempted to run SUSE on the new server. We have 95% IBM hardware – so I would like to buy IBM, with this in mind I have my eye on xSeries rack-mountable.

1. Has anybody got any advice on which model I should go for (budget of GBP 2000 ex VAT)?
2. Has anybody got any advice on which version of SUSE would be most appropriate?

Many thanks in advance.

H
