Hi, I have a number of mail servers out there which does exactly what you want and load more. Some for fewer people, some for more. The fastest one is a P4 2ghz with a gig ram:

3:19pm up 141 days 22:23, 2 users, load average: 0.00, 0.02, 0.00

For 2000 quid you won't have to upgrade anytime soon, unless your company doubles in size every couple of months.

I use whatever SUSE is current, currently 9.1 works really really nice on all setups.
