Than you configured... Your help is at:

<http://linux01.gwdg.de/apt4rpm/home.html#contents>

See:

```
SuSE/9.1-i386/base $ zgrep kdeb3\; contlist.bz2 | grep i586
```

```
kdeb3;3.2.1-63;i586;base
```

```
kdeb3;3.2.1-68.15;i586;update
```

```
kdeb3;3.2.1-68.23;i586;update
```

```
kdeb3;3.2.2-8;i586;kde3-stable
```

```
kdeb3;3.2.3-5;i586;kde3-stable
```

It seems you have kdeb3 (3.2.3) from apt component kde3-stable. While at the moment you have available via the source.list file 3.2.1-68.15 from apt component update.

Same is valid for arts:

```
SuSE/9.1-i386/base $ zgrep arts\; contlist.bz2 | grep i586
```

```
arts;1.2.1-31;i586;base
```

```
arts;1.2.1-35.4;i586;update
```

SuSE: Re: [SLE] apt updates

```
arts;1.2.2-2;i586;kde3-stable
arts;1.2.3-3;i586;kde3-stable
```

Now if you want to install a newer kde version (e.g 3.3) you need to add the apt component 'kde' to your /etc/apt/sources.list file.

```
SuSE/9.1-i386/base $ zgrep kdebase3-devel; contlist.bz2 | grep i586
```

```
.....
```

```
kdebase3-devel;3.3.0-1;i586;suse-people
kdebase3-devel;3.3.0-8;i586;kde
kdebase3-devel;3.3.0-8;i586;kde3-stable
```

The apt component is actually the kde supplementary directory from suse. After adding the component, perform an apt update and apt install digicam and see what gets reported.

You can check with 'apt showpkg kdebase3 | head -10' which version are available (do this e.g. after and before 'apt update').
