I have suse 9.1 professional and it seems whatever I try to open on the Desktop I get message

Could not find mime type  
octet-stream

I installed 9.1 about 3 weeks ago and have had no problems at all and I have not changed anything as far as I am aware. The last application I installed was TSE3 notedit sequencer about 10days ago but as I said everything was working fine until today. Any ideas?

Regards.
