Huh, how did I miss the original post?

> > *1) All of my icons within Nautilus are the generic "paper" icon. I tried switching icon themes to no avail.*

Not sure what would cause this – check with Google and maybe then head to [bugzilla.gnome.org](http://bugzilla.gnome.org)

> > *1.5) The "Computer" icon on the Nautilus toolbar... isn't. Nothing appears in that space.*

Hummm, two Nautilus related issues, wonder if you're missing a package – does apt upgrade hold back anything?

> > *2) None of my OpenOffice icons seem to work any more, including the ones on the generic SuSE menu. I created a launcher on a toolbar that calls /opt/OpenOffice.org/program/soffice, though, and this works fine. Double-clicking an OO.o file within Nautilus doesn't do anything either.*

The Nautilus one I think is to do with the MIME system – I'm seeing it too, and need to figure out why. Dunno what's up with your menu entries though – right-click, and hit Properties to see what they're trying to launch specifically.

> > *3) Evolution... a) Won't display the monospace font I like (B&H Lucida Typewriter) in 9pt size. It only goes down to 10. Quibble, for most people, but I've ditched whole distro's because of font issues before.*

[bugzilla.ximian.com](http://bugzilla.ximian.com)

> > *b) Gnome-pilot still seems broken. At least, it won't talk to my Tungsten C, which has no problems sync'ing with a GTK2-ized version of JPilot I compiled myself. Is this (still) a known problem, or should it be working? This alone might have been about 50% of the reason I wanted to try Evo 2.0.*

SuSE: Re: [SLE] ULB Gnome

Don't have a Tungsten, but it works with my M105. Will be doing updated packages of gnome-pilot soon though. Maybe this week, time allowing.

bugzilla.gnome.org again :)

- > *"Computer" displays all my drives except the external usb, even if mounted.*

Is the external one in fstab?

My new epiphany[-extensions] packages uploaded yesterday are the first I remembered to sign. I promise to do so in future :)

Oh yes, my key is also now in the rpmkeys APT component.
