Have you been upgrading only, since 8.2 or are you doing fresh installs each time.

The reason for asking, Is because I have ran into problems with just doing O.S. upgrades. Regardless, if it's Linux, Windows and Mac.

Really, I have an AMD 500 mhz server for home usage running non stop and it's even faster with 9.2 instead of it's previous 9.1. I'm still amazed over that.

I know it gets frustrating in this computer world. You just can't give up and lay down.

You will run into numerous Window problems as well!

All O.S.'s make you lose your hair, kick pc's, throw laptops, hang books from ceilings with ethernet cable. The list goes on and on. :)
