Hi again,

I'm trying to build the `qemu-0.6.0-3` binary package from the SuSE 9.2 `qemu-0.6.0-3.src.rpm` source package into SuSE 9.1. After solving most of the dependencies, i get here:

```
TWPT035001:/usr/src/packages/SPECS # rpmbuild -bb qemu.spec
error: Failed build dependencies:
    libnsd is needed by qemu-0.6.0-3
    libzio is needed by qemu-0.6.0-3
```

so i downloaded the source packages `libnsd-1.0-2.src.rpm` and `libzio-0.1-4.src.rpm`, and tried to build the binary packages. Here is my problem, i cannot build them because they are crossreferenced:

```
TWPT035001:/usr/src/packages/SPECS # rpmbuild -bb libnsd.spec
error: Failed build dependencies:
    libnsd is needed by libnsd-1.0-2
    libzio is needed by libnsd-1.0-2
TWPT035001:/usr/src/packages/SPECS # rpmbuild -bb libzio.spec
error: Failed build dependencies:
    libnsd is needed by libzio-0.1-4
    libzio is needed by libzio-0.1-4
```

Thanks,

Agustí

PD: I'm going to try modifying the spec fles...
