I noticed the following messages in /var/log/messages:

```
Nov 30 13:00:57 gofish [powersaved][6473]: resmgr: server response  
code 200
```

```
Nov 30 13:01:30 gofish last message repeated 13 times
```

```
Nov 30 13:02:32 gofish last message repeated 31 times
```

```
Nov 30 13:03:35 gofish last message repeated 31 times
```

```
Nov 30 13:04:37 gofish last message repeated 37 times
```

```
Nov 30 13:05:40 gofish last message repeated 31 times
```

```
Nov 30 13:06:42 gofish last message repeated 31 times
```

I would think this is not correct or a setting is wrong. No? I have searched the archives but most references were regarding laptops.

I am running SLES 9 on dual Opteron 246 on a Tyan S2882 motherboard. Its a rackmount server that will run 24/7 so I do not believe there is a reason to have powersave on.

Any ideas/suggestions are appreciated.

Thanks – Richard
