Hi Folks,

Since doing updates to, and fresh installs to 9.2 on systems w/ nvidia cards, I have started to doubt whether 3D Accl is really on, after d/l'ing the nvidia drivers via YOU.

Is there a really difinative way to know if the nvidia drivers are really installed??

Whenever I let YOU get, and install them, and after a re-boot, YOU >YAST >*Hardware* >*Graphics card & monitor* gives "3D Disables" and when I ask it to enable it, a box pops open that says that "you must use YOU to get and install the nvidia drivers" and then it gives details how to RE-install them since last time. But when I do this, and then check the 3D capabilities via YOU it shows the same negative results. Loops like that forever?

I have seen many times here that "Never mind, 3D is REALLY ON, but the system lies, trust me". So, is there a sure-fire way to verify that nvidia 3D is really ON?

PeterB
