

[SLE] X Server listening on loopback

Hello everyone,

I modified the following file:

`/etc/opt/kde3/share/config/kdm/Xservers`

so that my X server won't listen to tcp connections. I added the "--nolisten tcp" to the main line there. I restarted the X Server and when I use netstat I don't longer see any line listening on port 6000. Before I had:

```
0.0.0.0:6000
```

After the change I was expecting to see:

```
127.0.0.1:6000
```

The problem is I don't see anything now. How come? I thought that the "--nolisten tcp" argument meant that X should listen only on the loopback device. Isn't X client-server model? Or does it use IPC ?

Thanks in advance,

Jorge
