I found this on the suse web site.

SUSE Linux 9.1 (in connection with Kernel 2.6.x) includes the file /etc/modprobe.conf instead of /etc/modules.conf.

If you want to disable IPv6 on a permanent basis in SUSE Linux 9.1, change the file /etc/modprobe.conf as follows:

Change

```
alias net-pf-10 ipv6
```

to

```
alias net-pf-10 ipv6  
install ipv6 /bin/true
```
