hi,

a friend of mine is having problems with her kde log in. using suse 9.2. it gives the above message, and apparently doesn't allow her to log in... not 100% sure what is happening, cause she apparently can't get down to a regular terminal screen (ttyX). she's a general computer user, and i haven't seen the problem yet, so her description is very blurry (i.e. she **should** be able to get to the terminal, but she says she can't).

anyone heard of a similar problem? any ideas how to fix it?
