Hi !

I'm using Suse 9.2 Pro, on a AMD64 3000+ with 1,5 GB RAM and a Radeon X800 graphics card.

My problem:

The bootsplash is pink, and its graphics are not sharp.

I guess it's my graphics card:

When booting my old Suse 9.0 rescue system, that splash too has a colour engraving.

Other graphics under KDE are perfect.

Has anybody the same problem or knows a solution to this ?

Any help is appreciated.

Hendrik
