Hi guys,

I've been following this mailing list since SUSE 8.0 came out, and have kept every single mail. I know that might sound excessive, but having my own copy of at least a piece of "the archives" has helped more than a couple of times when connectivity isn't available.

Currently I have all my mail stashed in ~/Maildir – courier–imap gives me access to it. Nice setup as I can chop&change between mail clients any time I like.

However, the sheer volume of mail is becoming a problem. It's getting slower and slower, searches through mail folders take for ever and max out my CPU for minutes at a time.

I was wondering if there's a better way to store my mail?

Thanks
