Hi:

I just upgraded my Suse 9.1 to Mozilla 1.7.5 using the .rpm from

<ftp://ftp.suse.com/pub/projects/mozilla>

Unfortunately, this version still renders some pages horribly. I know that Mozilla and Firefox on Windows, and even Firefox (vanilla from Mozilla.org) renders these correctly on Linux:

<http://shop.mellesgriot.com/products/ProductLine.asp?plga=020160&mscssid=>

For that site, text is rendered on top of itself and the menu in the upper left is messed up.

<http://www.travelocity.com/?Service=TRAVELOCITY>

For the Travelocity site, notice the link overlaying the "Search flights" button. Things get really screwed when I: 1. select "Minors" equal to some number >0, 2. then the "Minor ages at time of travel" drop-down is overlayed by a link, so it cannot be used.

Anyone else notice these rendering problems on their Suse 9.1 installations? I am using 32-bit.

Thanks.
