I have tried to upgrade my SuSE 9.2 box to a 2.6.11 kernel and it failed to boot.

The error is

```
Loading kernel/fs/jbd/jbd.ko
```

```
Loading kernel/fs/ext3/ext3.ko
```

```
waiting for device /dev/hda6 to appear :..... not found --- exiting
```

```
to /bin/sh
```

```
sh: can't access tty; job control turned off
```

```
$
```

/dev/hda6 is my / partition

The same error appears with the 2.6.8-24-smp kernel

If I boot from my SuSE DVD and choose

>*installation*

>*boot installed system*

It will find the SuSE install and boot fine but only with the default 2.6.8-24 kernel which is uniprocessor.

Upgrading to the 2.6.11 kernel required upgrading mkinitrd 1.1 to 1.2

Any help please

I would rather not reinstall
