Hey all,

I really need to cut back on the spending, so unfortunately have to share a dial-up access. I've got one PC with SuSE 9.2, and the other (in another room) that runs W98.

I bought a dial-up modem that has a built in router and 2 NIC's, one card for each system.

My question(s):

Once I put the NIC's in the systems and hook to the router, what kind of thing(s) do I need to do on the SuSE box? I want to use my dial-up access number and password, so that shouldn't be hard to reconfigure on the windows box, but I'm not sure what to do once I have each PC hooked up to the router.

Thanks for any help with this. I have tried to read and study some networking sites, but all it seems to do is confuse me all the more. If someone could just give me a few steps or pointers to try, it'd sure be nice.

John B.
