Hi Folks,

I erased the partition table of a running machine. Shame on me. Machine is still running though. There must be a way to get the information from the running kernel. As fdisk states: "The kernel still uses the old table"

I tried /proc/partitions, but can't seem to get the cylinders right.

At the moment I am copying 120GB data over ethernet, which is kind of tedious.

Anyone ever recover from this ?

Regards

Dan
