To: SuSE email list <suse-linux-e@suse.com>

I'm installing SuSE 9.2 (I also tried 9.1) on a PC.

he installation seemed to recognize the mouse the first time I launched it (PCS) It's a 2-button and central wheel optic mouse with serial interface (I guess) in fact its plug is green and similar to the keyboard plug.

It's not a USB interface.

The first installation was interrupted by a power failure while reading the 4th CD (it had already gone through the 1st, 2nd, 3rd CD). By mistake I touched the power cord with my feet under the desk ..I tried to launch SuSE from the hard disk. It started with the login dialog. Unluckily I only had configured the root user and no other ones.

I restarted the simulation from scratch reloading from the CD 1 but since then it never recognized the mouse any more. So I cannot make any choice from the installation menus without the mouse as the arrow keys do not jump over the listed menu choices ...

What am I supposed to do ????

Thank you in advance for your help,

Maura
