On this local lan, the laptop only gets through the router sometimes.

And that because I go Yast – network services – routing table – expert config.

Destination 192.168.1.107

Gateway 192.168.1.1

Network 255.255.255.0

Device eth0

That might work fine until I close and reopen Konqueror.-- nothing.

Now if I blank out the above it might be ok again untill the browser is recycled off and on.

I got that from google, but need help to stabilize this.

.. Thanks John
