My floppy is read only, all the time, regardless of floppy or how tab is set
it always sees it a write protected drive

currently using this from /etc/fstab:

```
/dev/fd0 /media/floppy auto noauto,user,sync 0 0
```

originally I had this in /etc/fstab and only root could mount or umount floppy
and most operations attempts gave an error that it was not allowed with
protocol drives.

```
/dev/fd0 /media/floppy subfs  
fs=floppyfss,procuid,nodev,nosuid,sync 0 0
```

neither works properly

anyone know what the fix it-- as with my Umaxs 1220s scanner everything worked
ok with SuSE 8.0, and 9.0 (BTW: still have problems with the Umax 1220s
scanner not working, gave up on that one, can reboot to SuSE 9.0 to use the
scanner)

thanks in advance
