To: suse <suse-linux-e@suse.com>

does some one have a working smb.conf with which the samba deamon would work properly?

ive tried to configure it in many ways and even cut down the configurations to a few lines and yet i cant get the samba server to show up in network neighborhood on windows systems nor share files :P

all hints are welcome.

samba v3 brings a whole lot of new features dunno what swith overrides what...
