Hi,

I originally posted this on a KDE list but the only response I got was that someone else had duplicated the problem. He was also running 9.2 Pro so I thought maybe it's a SuSE thing...

Here's the problem. When I exit Knode the window goes away and all appears normal. However there is still a Knode process running so the next time I try to read news the program won't start. I have to find the process and kill it and then, of course, all is well again.

It's SuSE 9.2 Pro, KDE 3.3.0, Knode 0.8.0 on a P4.

Ideas on what's wrong? Or even how to further diagnose this?
