Running SuSE 9.2 Pro and KDE 3.4

Using Thundebird 1.0.2 for email and Firefox 1.0.2 as browser. When I was using the version of Thunderbird included on the SuSE DVD, clicking on a URL embedded in an email automatically invoked Firefox.

I recently upgraded Thunderbird to 1.0.2 (using apt). Now when I click on an http link embedded in an email nothing happens. The Thunderbird Help is also broken, probably for a related reason.

Using Google I discovered other people having the same problem, bit not fix. Or at least no fix I could understand. There were some references to using `gnome.conf` (or something like that) and also some references to the Windows version.

Maybe I just need a diferent rpm than the one on the apt repository. I installed the one from the SuSE mirror at <ftp.gwdg.de> with

```
rpm -Uvh --replacepkgs
```

but that didn't solve anything.

Any ideas short of going back to the one from the SuSE DVD?

Mike
