| If you use the Linksys router there is –NO– need to use pppoe on the
| server or any other PC for that matter. It becomes the default route for
| all of the other networked gear. PPPOE performed by the Linksys router.
i WANT all the internet to go through the server for various reasons.
one of them is that here in south africa we have a 2 gig cap on our line
and i want to see how much bandwidth each person in the network is
using, so that i can be forewarned about hitting our cap.

| It looks like you have very little networking experience and should
| learn a few more basics first.

thank you for that insult.
