THANX, I'll send the server' /etc/cups/cupsd.conf

and the /etc/cups/client.conf from the client.

> *...Also I will need the IP address of your server and client.*

OK

Appreciated. Could you comment in the respective files what changes you

made. The will help me see where I went wrong in future.

Well... I think I am running a firewall on my server. should port 631

be open not 633?

When I setup printing it tells me that a port has been opened on the

selected interface and I have selected the NIC but who know if it

actually happened. What file can I check?
