hi

After successfully upgrading from 9.1 to 9.3 on my laptop, I tried to do the same on my desktop:

SuSE 9.3 Installation (for update) fails to mount my root partition where 9.1 is currently loaded. I have SATA disks (and I don't have any IDE disks).

My root partition is hde2 (not hda1), but 9.3 wanted it to be sda. After changing some lines in fstab 9.3 thought it was sdg (but it wasn't).

What do I need to do?
