Hi:

I accidentally erased the field "Host" in the kprinter dialog where you define the cups server you wan to connect to. Now, everytime kprinter starts, it hangs indefinetly with the message Initializing Print Manager. I can let it wait for hours, but it will never go to the next step so that I can restore that field. Hence, I can not print form any KDE application. Printing from OpenOffice directly to my lp printer works. Anybody knows where kprinter keeps it's configuration settings? I tried to reinstall kbase3 but it did not help.

Thank you for your help.
