Hi All,

I have a 120GB hardisk with 3 partition, 1 is reiserfs (about 30 GB), and the other 2 are ext3. Whenever my system boot and goes to mounting reiserfs (/dev/hda1) it hungs. Then i go to rescue mode and comment the line in /etc/fstab for /dev/hda1 (it's reiserfs), and my system can boot smoothly. 2 ext3 partition can mount to /home3 and /home4.

Then I try to repair using reiserfsck /dev/hda1. It says there's a corruption data, and I should use reiserfsck --fix-fixable, I try that too. Ant there's no error after that.

But whenever I try to mount, it just hung, It can't mount it. I can access /home3 that already mounted, but when I list files (ls -l), it hungs too.

Is it my harddrive problem, or reiserfs problem ? I use SuSE 9.1 and had run YOU to update all patch.

Any comments are welcome.. I really need this partition.. :)
