hi all,

I want to host my home page from my computer.

Any guidance as to how this can be achieved is very much welcome.

I want to know where to put my index.html and how to access the web page from the net. I think something like setting up the web server is involved.

What do I need to type in the browser to get to my home page after it is hosted?

I am on SuSE 9.1 Pro.

Thanks for any help
Chaitanya.
