Hi,

On KDE 3.4 in SUSE 9.3 when I click on a URL in an Email Konqi opens but it is sorta hosed up. Example:

An email has a link:

http://www.cnet.com/4520-6033_1-6213658-1.html?tag=nl.e501

But the instance of Konqi has :

`/var/tmp/kdecache-pbvanca/krun/31689.0.4520-6033_1-6213658-1.html`

in the address box. The pages often are fouled up as well. Often the links within the page will not open properly. If you cut-n-paste the URL all is ok.

Has anyone found a fix for this?

PeterB
