Hi,

I do a lot of music stuff on my SUSE 9.3 KDE 3.4 systems and today I ran into a quirk in the CDDDB system.

A CD that was loaded was found in the CDDDB and that info was applied just as we expect AUDIOCD:/ to work; but the submitter of that CDDDB entry used the " / " char in each track title. When I clicked to the OGG dir for that CD and tried to 'drag' those OGG files (requesting encoding and placement in the dragged TO dir) KDE/AUDIOCD reported an error and aborted the operation. I found that it is not possible to edit the track title info in the AUDIOCD window. I was forced to go to GRIP, which allows editing.

Anyone figured out how to edit titles/tracks in KDE AUDIOCD?

PeterB
