The USB sound card should be available just by plugging it in. There is no need to add it using YaST. Use lsmod to see if the modules were loaded.

Which model do you have? I have the Creative MP3+

I have been using a USB sound card for over a year and did not see good support until 9.3. In 9.2 it was very flakey at best and would stop working for no reason. Sometimes just unplugging/plugging would get it to work again.
