I told you that you have to take this issue with SuSE list administrator. I reported a similar problem, and I know he/they are working on this. On mine, at least, not on yours if you don't report it.

> <suse-linux-e@lists.suse.com>:
> *ezmlm-reject: fatal: message already has a Mailing-List header (maybe I should be a sublist) (#5.7.2)*

That is just a secondary error, triggered by the first one: being considered a spammer.

SuSE: Re: FW: [SLE] rejected email to list

BAYES_95 (3.514 3.0) --> the bayes database at Relay2.suse.de has got to be retrained, manually. You must report this, fast! Solving this test would solve your whole problem.

DNS_FROM_RFC_POST, DNS_FROM_RFC_WHOIS --> this is caused by your ISP, and you must, if anything, take the issue with them – that is, supposing they listen to their clients. I know my ISPs don't.

NO_REAL_NAME (0.336 0.007) --> change your "from" address to include your real name. You send:

> *From: art.fore@comcast.net*

and SpamAssassin says there is no "" part with a real name, and marks it. The score is low (0.007), but at least yo can do something about it.

RCVD_BY_IP (0.051 0.067) --> Received by mail server with no name
RCVD_DOUBLE_IP_LOOSE (0.043 0.000) --> Received: by and from look like IP addresses
RCVD_NUMERIC_HELO (1.348 1.248) --> Received: contains an IP address used for HELO

I don't think you can do any thing about those, except convincing your ISP to correct it, or switching your ISP. I guess it is complaining about this two headers:

```
| Received: from 204.127.197.119 (rwrwbc80.asp.att.net[204.127.197.180])  
| by comcast.net (rwrwmhc12) with SMTP  
| id <2005063016535201400876ije>; Thu, 30 Jun 2005 16:53:52 +0000  
| Received: from [71.129.145.33] by 204.127.197.119;  
| Thu, 30 Jun 2005 16:53:52 +0000
```

That's an altogether different question. Please, open a new thread with it.

Cheers,

Carlos Robinson
