To: SuSe Linux mailing list <suse-linux-e@suse.com>

First, let me say I have tried searching the archives and I have tried several suggestions found there to no avail.

these do not work:

startx GNOME

startx gnome

startxgnome

changed virtual terminals too – no joy.

This works though:

startxfce4 – for XFCE4 of course

Originally, kdm was my desktop default manager; however, I changed that to gdm, but cannot perceive any difference in functioning.

For what its worth this is my first use of SuSe after 7 years or so with Mandrake. SuSe is nice :)
