Hi All,

I have been trying to get my Bluetooth mouse ( Kensington PocketMouse ) working with SuSE 9.3. I can get SuSE and my mouse to communicate ( it shows "Kensington PocketMouse" connected when I put the pointer over the bluetooth icon in the toolbar ) but the mouse doesn't do anything. Is there something else I need to configure? The other odd thing is that if I type "bluetooth:/" into Konquerer it shows my mouse but it has a joystick icon. Could this be the problem?

Thanks,

Scott
