Mates,

9.3, all updates, when the screen savers start, they start and run for a little while and then just \*stop\*. They're not locked. They go away as soon as there is mouse/keyboard input. But, they just sit there — not saving anything, just dead still. This occurs using the random selections, etc. No one in particular. Anybody else seeing this. It seemed to appear within the last week or so. Any ideas on what to check??
