It seems your isp is having connection problems. Try having dialer

kinternet / ginternet

up first then open your mailer program. Click the dialer and click view

log, view data

rate and check connection if the last line in the log is not connected

you are not.

Also check the time out in your modem setup I have set mine set to 300.

By going on

the web your maintaining the connection so it does not shut down.
