Hi All

I am trying to run the simplest of perl scripts. However when in Internet Explorer as in Mozilla as in Firefox i always get the same error message

<http://peterspretpaleis.dyndns.org:8000/cgi-bin/guestbook.cgi>

Premature end of script headers: guestbook.cgi

the contents of this script is

```
#!/usr/bin/perl print
?Content-type: text/html\n\n?;
print ?< html> ?;
print ?< body> ?;
print ?< h2> I just wrote my first web page using Perl!< /h2> ?;
print ?< /body> ?;
print ?< /html> ?;
```

<http://www.novell.com/cool solutions/feature/11790.html>

and perl finds the syntax ok

can someone shed some light on this or direct me to a place where i might find the answer?

I think it would be nice to use perl with apache2 or even create my own perl scripts

Thanx for your reply
