To: suse-linux-e@suse.com

I have tried numerous times to configure my Hauppauge PVR 350 with no success. The card is detected when I scan for channels, it says no channels found.

I know the card is working fine because I dual boot with Windows and it works fine.

I had the same problem in SuSE 9.3 and SuSE 10.0. Currently, I'm running SuSE 10.0 eval from a fresh install.

I'm in Canada and I beleive we use NTSC here just like USA. The closest options available when scanning for channels in YAST is NTSC us-cable and I get the following:

v4l2: open /dev/video0: No such file or directory

v4l: open /dev/video0: No such file or directory

Number of TV Stations Found: 0

Anyone knows why it's not working or how to configure it? Perhaps it's a Canada specific issue?
