In 9.3 with 2.6.11.4-21 kernel /var/log/messages tells me "kernel: smbfs: Unrecognized mount option noauto" when I try to mount this samba share manually. To mount the share, I must edit fstab to remove the noauto option, mount, then put it back after mounting so that it won't automount on a reboot. Mandriva 2006 with 2.6.12 kernel gives me no such foolishness with the exact same fstab entry, "... smbfs ro,fmask=664,noauto 0 0". How can I fix this?
