Sorry, this was misleading. The broadcom works, but it's nowhere near as good as the Atheros or Intersil based ones. I wouldn't buy it on a PCI or PCMCIA card, I only have it because it came in my notebook. But thankfully it is a mini-pci card so I can (and will) replace it.

Be careful, there are two Intersil chipsets, one is supported in the kernel, one isn't.

Also, I don't know if the Intel 2200 chipset is available on a PCI card, but it's a very very good controller, and works out of the box in linux – doesn't even need you to get the firmware because it's in the card.

Hans
