Hello,  
I have a small but annoying problem regarding my  
wireless connection. When SuSE 10 boots up, the  
wireless card doesn't connect to my network. It is  
configured through YaST to connect automatically at  
boot. Logging in as root and executing "rcnetwork  
restart" does the trick every time. Any guesses as  
to the initial hiccup?  
Thanks in advance,  
Michael Sacco
```

I had this problem and it was making sure smpppd was turned
off during the boot process. So ...

```
chkconfig smpppd off  
rcsmpppd stop
```

LDB

Thanks LDB. I gave that a shot. Unfortunately that didn't seem to hit the
spot. smpppd now reports status of unused on boot, but the wireless NIC
still hadn't connected.
