Hi everyone

I hope somebody can help – I think I broke the print manager, and does not know how to fix it.

In the print manager settings for the CUPS server, I removed the server name. In stead of typing "localhost", I entered. Wallah the print manager does not open anymore – it stop on the screen – "Initializing Manager".

Is there somewhere, I suppose so, a file that I can edit to put the server name back in, or is it screwed up really bad?

Regards

Kobus
(Hope this is correct, it is my first post.!)

Go to `~/kde/share/config` and edit `kdeprintrc` – Under [CUPS] change the line that says:

`Host=localhost`

save it and it should be fixed.

Regards.
