Think I am answering everyones questions bellow.

Windows installation is on the SCSI drive, the ide drive had at one time an OS, but it is just a "my documents" disk now.

My C drive for windows is /dev/sda1. I keep my boot fat so I can more easily get to it with boot drives, linux, old habbit I started back in windows NT days.

```
more /etc/fstab
users,gid=users,umask=0002,utf8=true 0 0
/dev/sda3 / reiserfs acl,user_xattr
```

1 1

```
/dev/hdc1 /windows/C ntfs
```

```
ro,users,gid=users,umask=0002,nls=utf8 0 0
```

```
/dev/sda1 /windows/D vfat
```

```
users,gid=users,umask=0002,utf8=true 0 0
```

```
/dev/sda2 swap swap defaults
```

0 0

(removed the non relivant lines)

It is a 9 gig HD, strange that it show it being bigger, during the install it says it resized the window partian to 5 gigs

RE: [SLE] Just installed SuSE 10

```
df -h
Filesystem Size Used Avail Use% Mounted on
/dev/sda3 3.0G 2.3G 747M 76% /
tmpfs 252M 12K 252M 1% /dev/shm
/dev/hdc1 20G 13G 6.6G 66% /windows/C
/dev/sda1 8.6G 3.4G 5.2G 40% /windows/D
```

When I set grub to boot off of hdc1 in yast(just in case), I get the following, and nothing else, just sits there,

```
"Chainloaer (#
Chd 1,0)+1"
```

```
more /boot/grub/device.map
(hd0) /dev/sda
(hd3) /dev/sdc
(hd1) /dev/hdc
(hd2) /dev/sdb
```

I can access /windows/D (which is really the C:), and look over boot.ini and other files.

```
Partitioner shows:
/dev/dhc 19.0gb Maxtor-5T020H2 0 2490
/dev/hdc1 19.0gb HPFS/NTFS /Windows/C 0 2490
/dev/sda 8.5gb SEAGATE-ST39204LW 0 1114
/dev/sda1 5.0 Win95 FAT32 LBA /windows/D 0 662
/dev/sda2 509.8mb Linux Swap swap 662 727
/dev/sda3 2.9gb Linux Native / 727 1114
```

```

RE: [SLE] Just installed SuSE 10

RE: [SLE] Just installed SuSE 10

GRUB is looking for your Windows installation at IDE hard drive 0 (the first drive primary hard disk on your system). The second 0 refers to the first partition on that drive. The +1 bit is correct. Now, is your Windows installation actually on this disk or is it on a SCSI disk or possibly elsewhere? From what you have said it sounds as though GRUB has picked up an old install that has only been partially removed.

Could you post the contents of files /boot/grub/menu.lst and /etc/grub.conf?

Greg Wallace
