```
rpm -qf /var/adm/fillup-templates/sysconfig.security
```

This one tells me that the package is
permissions-2005.8.30-2
but why did it not work with
rpm -qf /etc/sys../security...

and whats the logic behind /var/adm/fillup-templates/sysconfig.security
instead of /etc/sys../security

...

I have made changes in the /etc/sysconfig /security file

Didn't you make a backup? ;)

I have the backup ,but was curious to know....

but nothing shows here ,how do i know which rpm it belongs to , it came
with the install,

It is typical (and confusing) for files that are created /during/
installation.

I did not create it.

rpm did.
