I just did a fresh install on a box of SUSE 9.3 Professional, and when I did the update it was going fine but it freezes up on the font from Microsoft, and I'm wondering what my options are to get them installed. Any suggestions?

Actually it sometimes freezes and sometimes works. Here is how I work around it.

I updated system via Yast without installing M\$ Fonts. Next step, I installed Iptraf and run it. So I can monitor all network connections in real time. I simply picked up the all interfaces option. So I can monitor all.

Last step is installing fonts. I run Yast and checked the M\$ fonts. It downloads a shell script to install fonts. You will see the progress is %99. Actually it is not, script is running and installing fonts. It takes time

I waited for the script to finish. All fonts are installed. If you are not sure about the process, simply use up and down arrows on Iptraf, so you can see the transfer.

p.s: Iptraf runs on console. Become root and type iptraf.

Goksin Akdeniz

Thanks for the replies. I'll give it another shot. and I'm pretty good with iptraf so I'll load that up and have it monitor the connection while it does it's magic. I wasn't aware of where it downloaded the script from so I'll do that.

Thanks all,

-Allen
